

Thomas Saldate

18 October 2019

The goal of this project is to revise the story we are using. We need to make a flow chart of our story with 3 beginnings and 3 mature endings. After the flow chart you need to start the flow chart of how you will program the story. Start programming the story, include interactable buttons, objects to store story information, and arrays for potential choices. You must not include prompts, alerts, or confirm methods to display information. After programming comment your code, properly format your code, make sure to use camelCased and descriptive function, binding, and parameter names, and follow the D.R.Y principle. The end result should contain 3 beginnings and 3 endings, the story should also follow the 12 steps in a "hero's journey."
